

b-baryon ADMIXTURE ($\Lambda_b, \Xi_b, \Omega_b$)

b-baryon ADMIXTURE MEAN LIFE

Each measurement of the b -baryon mean life is an average over an admixture of various b baryons which decay weakly. Different techniques emphasize different admixtures of produced particles, which could result in a different b -baryon mean life. More b -baryon flavor specific channels are not included in the measurement.

¹ Measured mean life using fully reconstructed $\Lambda_b^0 \rightarrow J/\psi \Lambda$ decays.

² Measured using $\Lambda\ell^-$ decay length.

³ Measured using $p\ell^-$ decay length.

⁴ This ABREU 99W result is the combined result of the $\Lambda\ell^-$, $p\ell^-$, and excess $\Lambda\mu^-$ impact parameter measurements.

⁵ Measured using $\Lambda_c\ell^-$ and $\Lambda\ell^+\ell^-$.

⁶ Measured using the excess of $\Lambda\ell^-$, lepton impact parameter.

⁷ Measured using $\Lambda_c\ell^-$.

⁸ ABREU 93F superseded by ABREU 96D.

⁹ AKERS 93 superseded by AKERS 96.

¹⁰ BUSKULIC 92I superseded by BUSKULIC 95L.

***b*-baryon ADMIXTURE DECAY MODES** ($\Lambda_b, \Xi_b, \Omega_b$)

These branching fractions are actually an average over weakly decaying *b*-baryons weighted by their production rates at the LHC, LEP, and Tevatron, branching ratios, and detection efficiencies. They scale with the *b*-baryon production fraction $B(b \rightarrow b\text{-baryon})$.

The branching fractions $B(b\text{-baryon} \rightarrow \Lambda \ell^- \bar{\nu}_\ell \text{ anything})$ and $B(\Lambda_b^0 \rightarrow \Lambda_c^+ \ell^- \bar{\nu}_\ell \text{ anything})$ are not pure measurements because the underlying measured products of these with $B(b \rightarrow b\text{-baryon})$ were used to determine $B(b \rightarrow b\text{-baryon})$, as described in the note "Production and Decay of *b*-Flavored Hadrons."

For inclusive branching fractions, e.g., $B \rightarrow D^\pm \text{ anything}$, the values usually are multiplicities, not branching fractions. They can be greater than one.

| Mode | Fraction (Γ_i/Γ) | Scale factor |
|---|--------------------------------|--------------|
| $\Gamma_1 \quad p \mu^- \bar{\nu} \text{ anything}$ | $(5.8^{+2.3}_{-2.0})\%$ | |
| $\Gamma_2 \quad p \ell \bar{\nu}_\ell \text{ anything}$ | $(5.6 \pm 1.2)\%$ | |
| $\Gamma_3 \quad p \text{ anything}$ | $(70 \pm 22)\%$ | |
| $\Gamma_4 \quad \Lambda \ell^- \bar{\nu}_\ell \text{ anything}$ | $(3.8 \pm 0.6)\%$ | |
| $\Gamma_5 \quad \Lambda \ell^+ \nu_\ell \text{ anything}$ | $(3.2 \pm 0.8)\%$ | |
| $\Gamma_6 \quad \Lambda \text{ anything}$ | $(39 \pm 7)\%$ | |
| $\Gamma_7 \quad \Xi^- \ell^- \bar{\nu}_\ell \text{ anything}$ | $(4.6 \pm 1.4) \times 10^{-3}$ | 1.2 |

Γ_4/Γ

The values and averages in this section serve only to show what values result if one assumes our $B(b \rightarrow b\text{-baryon})$. They cannot be thought of as measurements since the underlying product branching fractions were also used to determine $B(b \rightarrow b\text{-baryon})$ as described in the note on "Production and Decay of b -Flavored Hadrons."
