

$P_c(4457)^+$

Status: *

was $P_c(4450)$

A resonance seen in $\Lambda_b^0 \rightarrow P_c^+ K^-$, then $P_c \rightarrow J/\psi p$, with a significance of 12 standard deviations. The $J/\psi p$ quark content is $uudc\bar{c}$, a pentaquark. See also the $P_c(4380)^+$. In the best amplitude fit, the two states have opposite parity, one having $J = 3/2$, the other $J = 5/2$.

Extraction of the pentaquark signals requires some understanding of the dominant $K^- p$ background. AAIJ 15P used a model-dependent approach. AAIJ 16AG reanalyzed the data making minimal assumptions about the $K^- p$ background, and thus confirmed the strong significance of the pentaquark signals.

$P_c(4457)^+$ MASS

VALUE (MeV)	DOCUMENT ID	TECN	COMMENT
4457.3±0.6^{+4.1}_{-1.7}	AAIJ	19W LHCb	$p p$ at 7, 8, 13 TeV
• • • We do not use the following data for averages, fits, limits, etc. • • •

¹ Search for J/ψ inclusive production in association with a charged particle, assumed to be a proton. POPOV 21 observes a resonant signal consistent with a superposition of the $P_c(4440)^+$ and $P_c(4457)^+$, using masses and widths measured by AAIJ 19W, at significance of 3σ .
